The vital link in the manufacturing supply chain

As the world's leading provider of heat treatments and specialist thermal processing technologies, Bodycote operates an international network of quality accredited facilities in support of prime manufacturers and their supply chains, improving the properties of metals and alloys, adding value through optimised performance and extending the life of components.

Customer focused, quality assured

We never forget that our customers have invested time, money and resources in all the components we process, which is why quality comes as a standard part of our service, ensuring that our customers' components are treated with care throughout.

Our facilities hold numerous international, national and customer approvals appropriate to the services they offer and the markets they serve. Bodycote operates a 24/7 service, using the latest technology and equipment, and a highly skilled, experienced workforce. Our customers can be confident their demands can be met, however stringent, with assured quality, cost-effectiveness and on-time completion every time.

An unrivalled network

Bodycote brings all the benefits of a large global company with local facilities focused on your needs – the technical expertise of the entire group, a wealth of metallurgical experience accumulated over decades of treating components from all industrial sectors, the most comprehensive range of services and an equipment network that can provide back-up capacity and processing options.

Further, our transport services are linked with process and production controls to deliver optimum logistics solutions for supply chain customers.
